21 Jul 2016

PHP 5.6.24 is released

The PHP development team announces the immediate availability of PHP 5.6.24. This is a security release. Several security bugs were fixed in this release. All PHP 5.6 users are encouraged to upgrade to this version.

For source downloads of PHP 5.6.24 please visit our downloads page, Windows source and binaries can be found on windows.php.net/download/. The list of changes is recorded in the ChangeLog.

21 Jul 2016

PHP 5.5.38 is released

The PHP development team announces the immediate availability of PHP 5.5.38. This is a security release that fixes some security related bugs.

All PHP 5.5 users are encouraged to upgrade to this version.

For source downloads of PHP 5.5.38 please visit our downloads page, Windows source and binaries can be found on windows.php.net/download. The list of changes is recorded in the ChangeLog.

Note that according to our release schedule, PHP 5.5.38 is the last release of the PHP 5.5 branch. There may be additional release if we discover important security issues that warrant it, otherwise this release will be the final one in the PHP 5.5 branch. If your PHP installation is based on PHP 5.5, it may be a good time to start making the plans for the upgrade to PHP 5.6 or PHP 7.0.

21 Jul 2016

PHP 7.0.9 Released

The PHP development team announces the immediate availability of PHP 7.0.9. This is a security release. Several security bugs were fixed in this release, including the HTTP_PROXY issue. All PHP 7.0 users are encouraged to upgrade to this version.

For source downloads of PHP 7.0.9 please visit our downloads page, Windows source and binaries can be found on windows.php.net/download/. The list of changes is recorded in the ChangeLog.

21 Jul 2016

PHP 7.1.0 Beta 1 Released

The PHP development team announces the immediate availability of PHP 7.1.0 Beta 1. This release is the first beta for 7.1.0. All users of PHP are encouraged to test this version carefully, and report any bugs and incompatibilities in the bug tracking system.

THIS IS A DEVELOPMENT PREVIEW - DO NOT USE IT IN PRODUCTION!

PHP 7.1.0 Beta 1 builds on previous releases with:

- Asynchronous Signal Handling (without ticks) in ext/pcntl.
- Additional Context in pcntl_signal Handler

For more information on the new features and other changes, you can read the NEWS file, or the UPGRADING file for a complete list of upgrading notes. These files can also be found in the release archive.

For source downloads of PHP 7.1.0 Beta 1 please visit the download page, Windows sources and binaries can be found on windows.php.net/qa/.

The second beta will be released on the 8th of August. You can also read the full list of planned releases on our wiki.

Thank you for helping us make PHP better.

07 Jul 2016
